

M-750 & M-750TG SERIES

Hot & Cold Water Mixing Hose Stations

These hot and cold systems enable the operator to manually regulate water temperature as necessary for the wash down application. The M-750, with or without temperature gauge, provides independent control of water for wash down applications where water temperature is non-critical. For applications where the water temperature is crucial and an accurate reading is essential, the M-750TG are equipped with a dial-type temperature gauge (TG) that indicates the wash water's exact temperature in both Celsius and Fahrenheit. A specially designed internal blending chamber efficiently blends hot and cold water.

The M-750 and M-750TG is constructed in all stainless steel. All models are equipped with a solid stainless steel hose rack for convenient storage. Available options for all units are:

- Wall Mounted – globe, ball, and angle valve entry
- Recessed Wall Box Units – globe and angle valve entry
- Pedestal Units – globe, ball, and angle valve entry
